The prior art of record fails to teach or suggest in combination as claimed, the features of independent claim 2. Specifically, the magnetic bridge power sensor comprising a magnetic bridge including: an excitation coil to provide a magnetic flux and a detection coil to detect the magnetic flux and a current which is obtained by subjecting

a current proportional to a voltage of a power line to at least one of an intermittent processing and an inverting processing, carried to the excitation coil, and an output of the detection coil is synchronously detected by a signal having a phase synchronized with a cycle of the intermittent processing or the inverting processing at a frequency twice as high as a frequency of the intermittent processing or the inverting processing.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
